

 **KUNST**

Our history...

Since the evolution of the human race, fire has been a vital element. It provides us with light, warmth, food, comfort and is a symbol of family unity. With the passage of time and technological progress, some of these needs have been satisfied in other ways, but the link between man and fire persists to this day.

At Kunst, we are manufacturers of wood-burning appliances and have been bringing fire into people's homes for more than 70 years. During these decades, we have evolved in the manufacture of our appliances, always at the forefront of the latest technologies.

We take care of the whole manufacturing process: from the conception of new ideas, design, prototyping, testing, enamelling, surface procedures, painting, to marketing and commercialization.

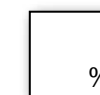

In our facilities, we have the most advanced machines in the market. Additionally, we have a laboratory equipped with the most sophisticated instrumentation, where we carry out research and tests to develop new models, obtaining more efficient equipment with lower consumption, always respecting the environment.

We unite the most modern and technological methods with the expert hand of the craftsman in our devices.

Our team is formed by more than two hundred and forty highly qualified professionals: engineers, factory workers and administration staff including big salesforce. We are an international company that is committed to talent and multiculturalism, which gives us incalculable human value. At Kunst, we work hard every day to offer our customers the best of ourselves.
